# FAQ: Clarifying Expectations for Suicide Risk Reduction in Nonpsychiatric Areas

In July 2019 The Joint Commission implemented the revised National Patient Safety Goal (NPSG) NPSG.15.01.01 related to suicide risk reduction, which was applicable to behavioral health care organizations and hospitals only. Effective July 1, 2020, NPSG 15.01.01 also will be applicable to critical access hospitals. The following answer to a frequently asked question (FAQ) received from customers clarifies how to address Standard NPSG 15.01.01, Element of Performance (EP) 1. EP 1 requires an environmental risk assessment to identify features in the physical environment that could be used to attempt suicide in nonpsychiatric areas of critical access hospitals and hospitals.

• For questions related to this FAQ or the suicide risk recommendation, please contact the Standards Interpretation Group via the [Standards Online Submission Form](#).

## QUESTION:

What are the requirements for an environmental risk assessment for suicide risk reduction in nonpsychiatric areas of critical access hospitals and hospitals?

**ANSWER:** The Joint Commission requires the following of an environmental risk assessment to evaluate potential suicide risks:

- | **Thoughtful evaluation of the environment.** The evaluation is meant to be a proactive process to, at a minimum, identify self-harm issues before a patient is placed in the room.
- | **A plan.** The plan needs to identify who is responsible for removing any objects identified to be of a self-harm nature.
- | **Resources to guide staff.** When caring for individuals at risk for suicide in a patient room in a nondesignated space, staff can reference resources, such as the following:
  - m Checklists identifying the self-harm objects to be removed
  - m Electronic flags (for example, the patient being placed in a medical/surgical room is high risk; sweep the room for items not essential for patient care that may pose a self-harm risk)
  - m Competency/training for all sitters who will be with high-risk patients to do the environmental assessments
  - m Visual reminders (for example, posters) of the most common items that are significant risks on the unit
  - m On-site psychiatric professional who is available to complete an environmental risk assessment in areas where staff do not have the training to do this independently 

# **Update:** Spring 2020 Postings to E-dition **for Accreditation and Certification**

# The Joint Commission Releases Next Round of Heads-Up Reports

## Reports Now Available for Critical Access Hospitals, Hospitals, and Laboratories

On March 20, The Joint Commission released its most recent version of the Heads-Up Reports to all accreditation programs. This program-specific report identifies important topics and themes that surveyors are noting and citing during recent surveys. In addition, the Heads-Up Report clarifies not only on what

# Consistent Interpretation

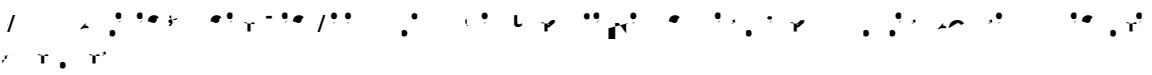

This issue of Perspectives presents the • **2020** Table of Contents for The Joint Commission Journal on Quality and Patient Safety (JQPS). The Joint Commission works closely with JQPS (published by Elsevier) to make it a key component in helping health care organizations improve patient safety and quality of care.

inappropriate testing and clinician feedback with the goal of reducing inappropriate tests being sent to the lab in conjunction with established approaches to reducing HO-CDI.

## Opioid Prescribing Practices

153 / 

S. Tsega, G. Hernandez-Meza, A.C. DiRisio, M.R. D'Andrea, H.J. Cho

Guidelines for opioid prescribing are associated with changes in prescription patterns, but many providers remain unaware of best practices surrounding appropriate opioid prescribing. In this article, Tsega and colleagues describe the experiences of first-year medical residents with opioid prescribing. (S. Tsega et al., *Journal of the American Medical Association*, 2019; 321(12):1153-1160)
